LEARN MORE

This is a succinct overview of the main product features, **please contact us if you require further details.**

Livextens Suite provides tools to develop your laboratory's quality management system and assess the competence of your laboratory.

Audit & traceability

- Reinforce traceability with a powerful audit trail
 - ➔ Benefit from a powerful investigative and search tool
 - ➔ Track actions that could impact patient data and requests
- Find out who did what and when, at every level
 - Patients** ➔ Track changes to a patient identity or stay
 - Test requests** ➔ Track all changes to a request: creation, test addition or deletion, clinical and technical review, result modification and consultation
 - Specimens** ➔ Follow specimens at every step: record the collector and collection date and time, track transportation and reception, and manage storage

Privacy & security

- Ensure that the confidentiality of patient information is maintained at all time
 - ➔ Define precisely what each user can view, enter, modify, and clinically review at each level of the organization
 - ➔ Allocate rights and access for laboratory according to their function and the data they need to do their job
 - ➔ Share a global view of the patient file and history by adjusting user rights easily to ensure the confidentiality is respected

Laboratory efficiency

- Increase the efficiency of your laboratory with a control panel
 - ➔ Monitor real-time activity by using relevant activity indicators
 - ➔ Manage resources in their best condition by dispatching work efficiently
 - ➔ Measure your real-time performance and your TAT by using specific indicators
 - ➔ Respect your service agreement by triggering alerts to specific distribution lists
- Improve your quality of service, respecting your service agreement
 - ➔ Trigger alerts by SMS or email to target distribution lists in your laboratory

Document management

- Benefit from document control mechanisms required for accreditation
 - ➔ In a single tool, manage the lifecycle of a document: creation, approval, update, and distribution
 - ➔ Save time by using an automated process for document review, modification, and approval
 - ➔ Distribute documents to specific users only, thanks to user rights management for multi-laboratory organizations

Non-conformity & complaints management

- Save time and manage non-conformities inside your Laboratory Information System
 - ➔ Record non-conformities directly in ^{TD}NexLabs: information is recovered automatically from the session
 - ➔ Manage and follow corrective or preventive action plans
 - ➔ Use relevant quality indicators to measure how efficiently your laboratory fixes non-conformities
 - ➔ Improve the everyday quality of your processes
